Human Language Technology
Conference of the
North American Chapter of the
Association of Computational Linguistics

Tutorial Abstracts

Chris Manning, Doug Oard and Jim Glass
Tutorial Chairs

June 4-9, 2006
New York City, USA

Published by the Association for Computational Linguistics

# Table of Contents

*What’s in a Name: Current Methods, Applications, and Evaluation in Multilingual Name Search and Matching*
  Sherri Condon and Keith Miller ................................................................. 299

*Beyond EM: Bayesian Techniques for Human Language Technology Researchers*
  Hal Daume III ............................................................................................... 301

*Graph-based Algorithms for Natural Language Processing and Information Retrieval*
  Rada Mihalcea and Dragomir Radev ........................................................... 303

*Automatic Spoken Document Processing for Retrieval and Browsing*
  Ciprian Chelba and T. J. Hazen ..................................................................... 305

*Tutorial on Inductive Semi-supervised Learning Methods: with Applicability to Natural Language Processing*
  Anoop Sarkar and Gholamreza Haffari ...................................................... 307

*Automatic Semantic Role Labeling*
  Scott Wen-tau Yih and Kristina Toutanova ................................................ 309
